

# BEEF CREEP FEEDING PROGRAM

## Increase Calf Weaning Weight with Hubbard Beef Creep Feeds

Creep feed can significantly increase calf weaning weight. Milk and grass production declines just as the calves' requirement for intake and energy is at its highest. Creep feed fills the energy gap, maintaining calf gains through the grazing season.

Hubbard calf creep feeds are carefully formulated to support maximum gain potential, genetic expression and "bloom" in young calves. Highly digestible sources of fiber are included.

### Hubbard Creep Feeds Help:

- Simplify weaning
- Acclimate calves to feed
- Reduce weaning stress
- Reduce weaning shrink
- Reduce digestive upsets

## Choose the Hubbard Calf Creep that best fits your needs

### ClassiCalf 14%

A good choice when a high feed efficiency and rate of gain is desired.

- Very palatable
- Energy/protein balanced
- High energy density
- Highly fortified

### ClassiCalf 16%

Specially formulated for high growth potential calves and for late season feeding when the milk supply is reduced.

- Very palatable
- Higher protein for high growth potential
- Fits late season feeding
- Highly fortified
- Available in a cob-based option to balance energy intake

### GroLean 16%

Recommended for maximum muscle growth during late season when milk production and forage quality decline. Formulated for optimal genetic expression of today's larger-framed calves.

- Bypass protein to promote muscle growth
- Compensates for late-season protein deficiency
- Unique energy/protein balance
- Highly fortified

**Nutritionally formulated to help calves reach their genetic potential.**

# CREEP FEEDING PAYS

**“I know that my creep fed calves weigh more, but does creep feeding actually pay?”**

Use this worksheet to calculate your creep feed advantage.

## Advantages of a Quality Calf Creep Program:

- Increase efficiency of feed utilization
- Increase muscle and frame development
- Minimize fattening
- Reduce digestive upsets
- Help calves express their genetic potential

## Big Easy Feed Finance Program

- 0% Financing on as little as \$2000 of purchases
- Applies to Hubbard branded feeds including creep feed and CRYSTALYX®
- Easy annual sign-up
- Shipping can occur anytime throughout the contract period

Creep Feeding Worksheet			
A.	Pounds of creep feed per calf		Typical 200-400
B.	Price per pound of creep feed		
C.	A times B = Creep feed cost per calf		
D.	Feed conversion factor for creep feed (pounds of creep per pound of gain)		4-8 to 1
E.	A divided by D = Pounds of Gain per calf		
F.	Calf market price per pound		
G.	E times F = Added value per calf from creep feed		
H.	G minus C = Net value per calf from creep feeding		
I.	Number of Calves		
J.	H times I = Total Profit
