

Mineral Program

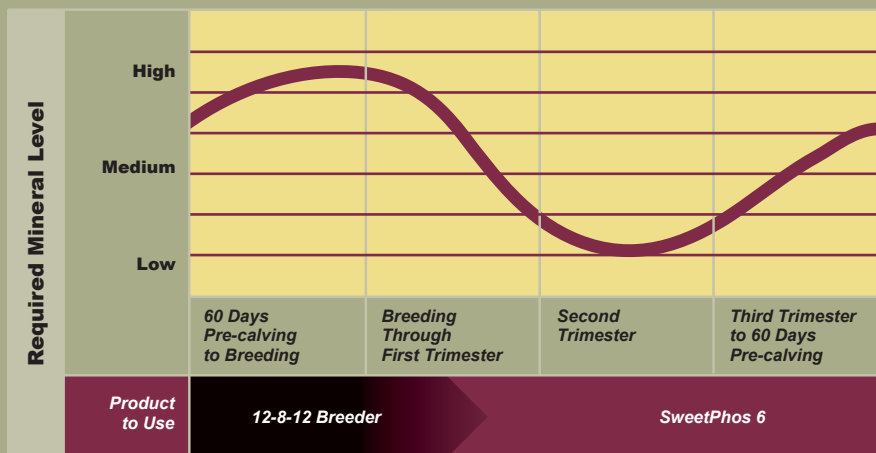

Easy Program

With two main product options you know exactly which products to feed and how they fit your calving schedule.

High Value Fortification

Mineral fortification can affect pregnancy rate, calf health and overall cow herd performance, all of which have an impact on your bottom line. The Stockmaster® Mineral Program is a high value fortification program that can positively affect your cow herd's overall production.

Mineral Requirements Cycle

STOCKMASTER® 12-8-12 Breeder Mineral

- Designed to be fed during the critical period from 60 days before calving through breeding.
- Formulated using organic trace minerals to increase bioavailability so cows can utilize a greater percentage of the nutrients fed.

STOCKMASTER® Sweet Phos 6 Mineral

- Designed to be fed from the time cows are bred through 60 days pre-calving.
- The high-quality fortification is ideal for cattle consuming growing or stored forages.
- Manufactured using carriers that help ensure proper mineral intakes.
- Contains mineral and vitamin levels that support efficient maintenance and immune functions.

Complimentary Mineral Options

STOCKMASTER® CoPro No Phos Breeder Mineral

- Formulated with trace minerals, organic trace minerals and vitamins to supplement rations containing corn ethanol products. It is recommended that STOCKMASTER® Copro Breeding Minerals be offered from 60 days prior to calving until the cows are again pregnant.

STOCKMASTER® Rangeland B1440

- Designed to be fed to replacement heifers and growing stocker cattle. The free choice mineral offers a convenient way to feed Bovatec® for increased rate of weight gain in pasture cattle.

STOCKMASTER® Aureo FC C6000

- Designed to be fed free choice as a convenient source of Aureomycin®
- Aureomycin® protects cattle against clinical anaplasmosis caused by anaplasma marginale susceptible to chlortetracycline.

STOCKMASTER® 14 Mag Mineral

(may require minimum order)

- Designed for cattle grazing lush, rapidly growing pastures that are low in magnesium when Grass Tetany is a concern.
- Fortification levels are appropriate for supplementing lush forages.

STOCKMASTER® Benefits: More Than Minerals

The STOCKMASTER® Mineral Program takes mineral supplementation to the next level.

People

STOCKMASTER® Minerals are supported by people with thorough knowledge of their product and a commitment to your success.

Manufacturing Performance

Rest assured knowing Hubbard's commitment to food safety goes farther than any other North American feed company. Our facilities demonstrate and ensure continuous improvements in the delivery of safe, wholesome livestock feed. Through FDA's Food Safety Modernization Act (FSMA), we maintain principles that ensure consistency that products are made the same way every time and according to quality standards. We also maintain quality principles through our parent company's quality program called AQS (Alltech Quality System), which is subject to internal auditing for compliance.

Finance Programs

Hubbard offers the Big Easy Feed Finance program to make it easier for you to achieve your goals.
