

INTRODUCING...

SHOW·RITE®

RITE FLEX JOINT SUPPLEMENT

Show-Rite's Rite Flex is a product that has shown great benefits in the mobility and flexibility of swine, sheep, goats, beef cattle, and horses. This product is the culmination of a multi-year research trial effort by Show-Rite to bring the best joint supplement possible to market.

This pelleted supplement is designed to optimize the overall performance of an animal by:

- Promoting healthy mobility
- Supporting motion and flexibility
- Supporting healthy bones and joints
- Supporting healthy cartilage and synovial fluid
- Supporting healthy skin
- Promoting a healthy immune system

Additional Benefits:

- Contains no added copper so it can be fed to all classes of show animals
- Formulated with added selenium for supporting nerve, muscle, joint and metabolic function

If there are any questions pertaining to Rite Flex, please feel free to reach out to your Hubbard or Show-Rite representative for more information.

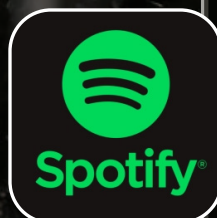

PERFORMANCE IS SERVED.

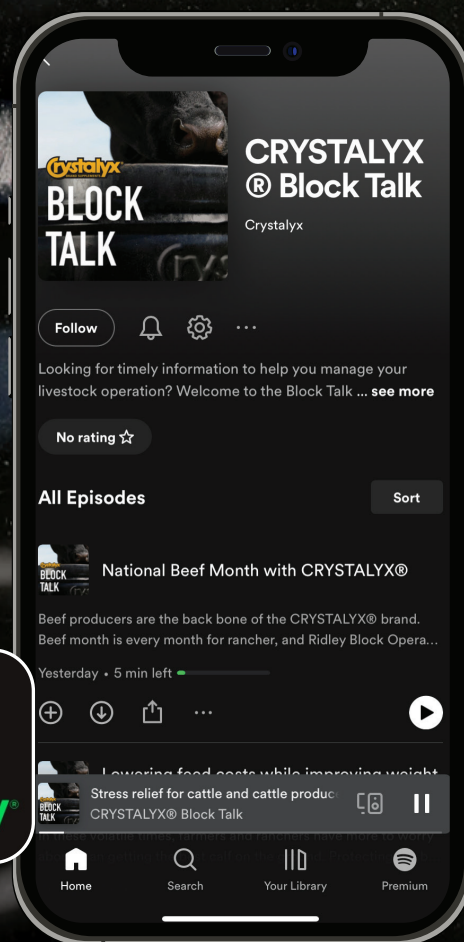

PERFORMANCE IS SERVED — CRYSTALYX® PODCAST NOW AVAILABLE ON SPOTIFY!

How to listen:

1. Download the Spotify app to your phone.
2. Search for "Crystallyx" within the app and listen!
3. Click "Follow" to be notified of new episodes.

BUNK STABILIZER - DRY

SUMMERTIME RATION ADDITIVE TO KEEP YOUR FEED COOLER

PROFILE

BULLETPROOF® Bunk Stabilizer (code 29099) maintains the freshness of total mixed rations (TMR) that contain fermented feeds. The antioxidants in BULLETPROOF® Bunk Stabilizer inhibit the growth of undesirable yeast and other spoilage organisms that can cause heating and reduced feed intake.

PRODUCT MODE OF ACTION

BULLETPROOF® Bunk Stabilizer contains sulfur-containing antioxidants which limit the growth of undesirable yeast and molds by acting as an oxygen scavenger and maintaining the pH of the mixed feed. Wild-type yeast are present in fermented forages and high-moisture grains, which are commonly included in a TMR. The mixing action of the TMR exposes these undesirable yeast to oxygen. Left unchecked, the yeast will cause the TMR to heat. In addition, other sugar containing ingredients commonly added to the TMR will be used by the yeast as an energy source. The combined effect of heating and nutrient loss often results in lower feed intake and reduced milk production and gains.

USE BULLETPROOF® BUNK STABILIZER WHEN THERE IS RISK OF HEATING IN:

DAIRY

- Lactating Diets
- Dry Cow Diets
- Youngstock diets

BEEF CATTLE

- Receiving Diets (High Forage Diets)
- Growing Diets
- Finishing Diets

APPLICATION RATES:

Apply 1-3 pounds per ton of TMR. Apply 2-3 pounds per ton when there is increased risk of TMR heating due to the inclusion of warm ingredients and/or high ambient temperatures and humidity.

INCREASED FEEDING RISK FACTORS:

1. High corn silage diets that have high yeast counts.
2. Drier diets due to increased oxygen exposure.
3. High ambient temperature.
4. Diets that contain heated or partially fermented forage

Application Directions: BULLETPROOF® Bunk Stabilizer may be applied across the top of each load of TMR or added to the grain portion of the mix. Effort should be made to get even distribution.

COME SEE US!

July 3-9: Show-Rite at NJSA Summer Spectacular, Louisville, KY

July 12-14: Beef Focus Meeting, Sioux Falls, SD

October 4-7: World Dairy Expo, Madison, WI

COOL COMMAND ENHANCE

BALANCED ENERGY

High-fat, extremely palatable extruded nugget provides cool energy

TOTAL SUPPORT

Unique vitamin and organic trace mineral blend aids in overall immune function and health

DIGESTIVE SUPPORT

Added prebiotics and probiotics promote enhanced gut health

FOCUSED FORMULATION

Unique amino acid and fatty acid blend promotes ideal skin, hair and hoof condition
