

TRANSRITE SOW ULTRA

focus on pre-farrowing

What is TransRite Sow Ultra?

A specially formulated topdress designed to provide the proper cation-anion balance in sows due to farrow.

What are the benefits of TransRite Sow Ultra?

- Improved muscle contraction – resulting in less farrowing stress
- Lower stillborn rate due to improved farrowing ease
- Sows eat better after farrowing which improves milk production resulting in pigs with more vigor
- Increased weaning weight due to greater milk production

How do I feed TransRite Sow Ultra?

Topdress 1 scoop (25 gms) per sow per day for 3 days before farrowing.

Why TransRite Sow Ultra?

Why not protect your investment? Gain .5 pigs/litter on sows that face less stress, improved feed intake and greater milk production when fed TransRite Sow Ultra.

SECOORB

focus on farrowing

What is SecoSorb?

SecoSorb is a high quality ready-to-use moisture absorbent that can be used on newborn pigs to quickly dry them off and prevent chilling.

What are the benefits of SecoSorb?

- Conserves body heat of newborn piglets – decreases risk of chilling
- Reduces environmental moisture, which reduces the likelihood of bacterial growth
- Absorbs more than its own weight in water. Drying of wet surfaces reduces chance of injury to the animal/caretaker
- Animal friendly - all ingredients classified as GRAS (Generally Regarded As Safe)

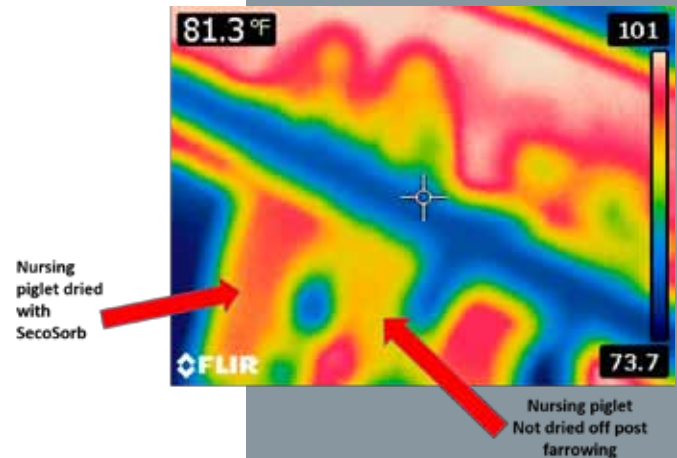

How do I use SecoSorb?

Hold newborn piglets over a container and vigorously rub SecoSorb on the pig from the neck to the tail until the pig is dry.

Sprinkle SecoSorb on comfort mats and/or flooring to soak up moisture due to scouring, urination or water.

Why SecoSorb?

Thermal images taken of newborn pigs show how fast they lose body heat and how long it takes them to recover. Pigs dried with SecoSorb had higher body temps and nursed sows quicker than pigs left to dry on their own.

Piglet treated with SecoSorb
30 minutes post-farrowing

Piglet left to air-dry
30 minutes post-farrowing
